TOWN OF MAMMOTH LAKES INFORMATION REGARDING BUILDING DAMAGE RESULTING FROM HEAVY SNOW:

GENERAL INFORMATION:

- When the Town experiences periods of heavy snowfall, some structures in town can experience some degree of structural damage. Some damage can be minor, while other structures can experience significant structural damage.
- Small cracks in drywall and doors not closing fully can be common symptoms
 of snow load induced stress on buildings. While this may at first appear to be
 alarming, these signs are normal, even in average snow years, and your
 building is likely to be structurally sound. However, should you see broken or
 fractured structural members, such as roof rafters and beams, or crushed in
 roof or wall surfaces, please dial 911. Such damage should also be reported to
 the Mammoth Lakes Building Division at (760) 937-5939 or (760) 965-3632.
- It is highly recommended that roofs have the snow cleared off of them in order
 to reduce the stress on the structure. Even if all of the snow and ice cannot be
 removed, removing at least the top half to two thirds of the roof snowpack is
 very beneficial. For condominiums and other structures that have property
 management, please contact the property management company immediately
 should there be any apparent structural issues, in addition to the Mammoth
 Lakes Building Division and the MLFPD.
- Please also be aware of shedding snow and ice at entries and exits. Very large
 ice dams will form over time, and they will end up breaking loose from the roof
 and fall. This is a serious life-safety hazard and should be watched at all times.
- All exits and entries into buildings must have snow and ice removed in front of them so that egress from the building can be maintained in addition to allowing for ingress of emergency personnel in the event of an emergency.
- Individual propane tanks, along with the yard pipe assembly where the gas pipe
 enters a structure should also be cleared of all snow and ice. The gas pipe
 point of entry into a structure is usually where the meter and the second stage
 regulator are usually located. This location is usually marked with a 2" reflector
 above the assembly.
- All emergency-escape rescue openings (windows and doors in rooms used for overnight sleeping purposes) must be maintained free of snow and ice.
