

The Sierra Conservation Project & Town of Mammoth Lakes are excited to announce the expansion of current condominium recycling programs in the Town of Mammoth Lakes. SCP is working on a grant-funded project to deliver comprehensive recycling programs to condominium complexes in the Eastern Sierra. This joint effort between Sierra Conservation Project, The Town of Mammoth Lakes and CalRecycle will provide a unique opportunity for multi family residential locations to set up their facilities with professional and effective recycling infrastructure at no cost while supplies last.

How the program works...

SCP will provide costly bear proof recycling systems at no cost to local complexes. Affordable program implementation allows complexes to reduce environmental impacts with no set up expenses. The Sierra Conservation Project will conduct a free on-site analysis of your complex. We will then create an implementation plan and deliver the recycling infrastructure needed to start an efficient and effective recycling program for your Mammoth Lakes location.

- 1. We will provide all recycling infrastructure needed for your participation in this recycling program.** *SCP will assist in designing a custom recycling program for your complex and provide all start-up materials.*
- 2. We deliver and install specialized recycling collection containers and equipment to meet the specific needs of your complex.** *Indoor and outdoor bear proof containers are costly and often limit HOA and managers ability to implement recycling programs. This program provides containers at no cost to you.*
- 3. The Sierra Conservation project will provide refrigerator magnets for each unit of your complex to educate guests and residents of recycling container locations.**
- 4. Finally, Sierra Conservation Project services recycling containers on a weekly basis or as needed to keep your program running smoothly without additional work for your employees.** *We handle the separation and preparation of recyclable materials, residents and guests simply places recyclables in provided containers and we handle the rest. Pickup and sorting service charges depend on the size and pickup frequency needed at your complex.*

The benefits of recycling at your complex

- ⌚ **Cost savings on trash removal services**

Many local complexes have realized the benefit of recycling their glass, plastic and aluminum materials rather than throwing them away to be dumped in our local landfill. Recycling will save you money on trash removal fees while reducing the environmental impacts of your project.

- ⌚ **Specialized recycling containers provided at no cost to you**

There are many recycling container options to choose from. Bear-proof containers are recommended for most outdoor recycling container applications. Indoor recycling systems provide a uniform look and convenient recycling locations for office and common area applications.

- ⌚ **Reduced environmental impacts = added value at your complex**

By participating in this program your complex will be providing convenient recycling opportunities for guests and residents. Managers are constantly asked “where are the recycling containers located?” Having onsite recycling opportunities adds value to your guest’s experience. As a participant of the Sierra Conservation Project, your company will be listed as a participating “green business” on our web site and in our newsletters.

- ⌚ **Uniform and professional look**

Plaza containers come in many styles to match the look of your complex décor and existing trash containers. SCP staff insured containers are clean and attractive; we wear identifiable uniforms and use state of the art equipment for professional results.

- ⌚ **Promotes your complex as an environmentally responsible member of the community**

Our experience has shown that guests, residents and members of the community will recognize and appreciate recycling opportunities at your complex. SCP participant decals and signage are provided to show your patrons your complex is doing its part to protect our environment.

The Sierra Conservation Project Team

- Our specialized equipment and experience operating in all weather conditions in Mammoth Lakes insures your prompt and efficient service year round.
- Our friendly and professional staff wear identifiable uniforms and operate 7 days a week to accommodate fluctuating guest volumes.
