**TOWN OF MAMMOTH LAKES INFORMATION REGARDING  
BUILDING DAMAGE RESULTING FROM HEAVY SNOW:**

➤ **GENERAL INFORMATION:**

- When the Town experiences periods of heavy snowfall, some structures in town can experience some degree of structural damage. Some damage can be minor, while other structures can experience significant structural damage.
- Small cracks in drywall and doors not closing fully can be common symptoms of snow load induced stress on buildings. While this may at first appear to be alarming, these signs are normal, even in average snow years, and your building is likely to be structurally sound. However, should you see broken or fractured structural members, such as roof rafters and beams, or deformed roof or wall surfaces, please report that damage right away to the Mammoth Lakes Building Division at (760) 937-5939 or (760) 965-3635. You may also contact the Mammoth Lakes Fire Protection District (MLFPD) at (760) 934-2300.
- It is highly recommended that roofs have the snow cleared off of them in order to reduce the stress on the structure. Even if all of the snow and ice cannot be removed, removing at least the top half to two thirds of the roof snow pack is very beneficial. For condominiums and other structures that have property management, please contact the property management company immediately should there be any apparent structural issues, in addition to the Mammoth Lakes Building Division.
- Please also be aware of shedding snow and ice at entries and exits. Very large ice dams will form over time, and they will end up breaking loose from the roof and fall. This is a serious life-safety hazard and should be watched at all times.
- Individual propane tanks, along with the yard pipe assembly where the gas pipe enters a structure should also be cleared of all snow and ice. The gas pipe point of entry into a structure is usually where the meter and the second stage regulator are usually located. This location is usually marked with a 2" reflector above the assembly.
- All emergency-escape rescue openings (windows and doors in rooms used for overnight sleeping purposes) must be maintained free of snow and ice.

A list of local resources has been provided below. They include contacts for local snow removal contractors as well as other general contractors, engineers, and building supply stores.
